

Helping Mothers and Babies Survive Pre-Eclampsia & Eclampsia

ACTION PLAN 1

Assess (if > 20 weeks pregnant)

CLASSIFY

PRE-ECLAMPSIA

**dBP ≥ 90 or sBP ≥ 140 and
≥ 2 + proteinuria
No Danger Signs**

Reassess

Normal?

Routine care

Yes →
No →

Do laboratory tests

Normal? → No

Yes

Increase follow up

Stable? → No

Yes

**Confirm gestational age
Deliver at 37 weeks**

**Provide essential care
Continue to monitor**

Result normal? → No

Continually assess for Danger Signs

SEVERE PRE-ECLAMPSIA

**dBP ≥ 110 or sBP ≥ 160 and
≥ 2 + proteinuria** **or** **Pre-Eclampsia
and
≥ 1 Danger Sign**

ECLAMPSIA

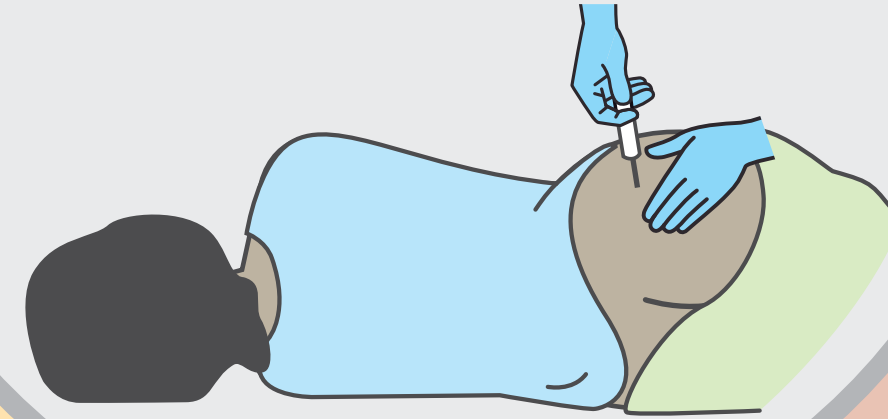

Convulsions or Unconscious

**Safely
manage all
convulsions**

Mobilize team

**Give loading dose
of magnesium sulfate
(MgSO₄) IV + IM**
